

Description DynaPass OTP Services is a Web Service based One-Time Password system using SMS as the OTP transport channel. The client software can be any system supporting Web Service access to Internet. Password generation and verification is handled by DynaPass Internet hosted Service.

Packaging Client side software is not included. All Service Interface Descriptions are available on the DynaPass site <http://www.dynapass.com>.

(the DynaPass OTP Services software can also be delivered as a locally hosted service running in your own domain. Contact us for technical information and prices.)

Ordering Send an email to order@april.se with product number and customer reference.
